## Continuation of 2. NOTE:

The finally rejected claims have been amended to define the support as an "electrode substrate supporting an electrode comprising a probe emobilizing support"; to define the insulating member as "polyehter ether ketone or polyterafluoroethylene" and to add claims which define the electrode as a cylindrical electrode projecting from the electrode substrate having a probe-immobilizing surface. These limitations and definitions have not previously been considered. Therefore, the amendments and new claims would require further search and consideration.

The amendments, if entered would overcome the previous objection to Claim 11 and rejection of Claim 20 under 35 U.S.C. 112, first paragraph.

Applicant's arguments regarding have been reviewed. However, the arguments are deemed moot because they address the unentered amendments.
